

Diagram showing a strategic plan for communication during the CEMBO project was prepared and will be included in the final reporting. Internally, the CEMBO consortium communicates through regular online or on-site meetings, the meeting minutes of which are published on the official CEMBO website.

The CEMBO project is disseminated to public through external activities like Workshops, Training schools and Conferences. Scientific outputs are published in relevant clinical and scientific journals and raw data are stored on the Zenodo platform established as one of the CEMBO deliverables (D4.4 Data Management Plan). The importance of biofilm research was also highlighted in the media (social media & press) through the dissemination of the CEMBO project.

Another important non-scientific activity is the publication of 2 critical articles on project management in widening countries and ways how to improve them. The CEMBO social media was a place to disseminate job offers for postdoctoral fellows from Ukrainian countries that were successfully contracted. CEMBO became a part of Networking through the Institutional platform “Practice for universities, solutions for companies” – an initiative organized by Slovak Investment and Trade Development Agency.
