

The MoKi Analytics GmbH included in the CEMBO project provides CU experiences with translation of research to commercial diagnostics through different ways, e.g. staff exchange (November 2021, Germany), workshop (July 2021, on-line), expert visits (March 2022, Slovakia) and training school (Jun 2021 and March 2022, on-line). Workshop organized in December 2021 held virtually also provided insight in novel techniques and connections to international companies and research groups and the possibility to apply for new research and funding initiatives. Strong cooperation between MoKi and CU is continually ongoing through joint research on visualisation of biofilm treated with different antimicrobials/materials. Cooperation between all partners is expected on projects at the national and international level on biofilm research through techniques provided by partners and implementation of FISH technique at CU. Several project proposals were submitted or are under preparation; the COST Action Proposal under the No. OC-2021-1-25282 was submitted in October 2021 funded by the Horizon 2020 Framework Programme of the European Union, proposal submitted in October 2021 under the contract No. APVV-21-0302 supported by the Slovak Research and Development Agency, application call in April 2022 from the Ministry of Education, Science, Research, and the Sport of the Slovak Republic.
