

The Staff Exchange Program was one of the key activities of CEMBO project. All institutions participating in the project have allowed the transfer of experimental or administrative skills to each other but mainly for the benefit of the CU partner. Overall, 12 staff exchanges were completed during the project duration despite of unfavourable pandemic situation; in the first year (2021) three, in the second year (2022) one and in the last year (2023) eight. All specifications of the missions are summarized in Deliverable D2.3.

The staff exchange activities have significantly expanded the experience in experimental work of the CU team. The main outcome of the mutual cooperation was the publication of a research article (Gaálová-Radochová et al., *Antibiotics*, 2023) and another one has been recently prepared. Administrative skills gained through these short-term missions have been used for improving the management in international projects at CU. Overall, the Staff exchange activities have moved the scientific value of the CU to a higher level, resulted in e. g. the inclusion of the CU team in two COST applications.
